À la Carte Lessons

No time to attend a full short course or workshop? Request a stand-alone training session lasting about two hours, presented to your small group by the cyberinfrastructure staff. Science teams visiting SESYNC for a project meeting may break for an afternoon to build relevant skills in basic programming, git/GitHub, visualization, mapping, database connectivity, and more. Our lessons are also suitable for self-guided study, which individuals may work through at their own pace.

Choose from the lessons above, or suggest a different lesson topic that will facilitate your research, and e-mail a scheduling request to cyberhelp@sesync.org [1].
