A Tool to Save Species: SESYNC Science Team Leads Effort to Increase Transparency in Endangered Species Recovery

By Kate Weiss

On May 5, 2017, a National Socio-Environmental Synthesis Center (SESYNC) science team led by Leah Gerber and Mike Runge presented a tool to Senior Administrators of the U.S. Fish and Wildlife Service (USFWS) that may help the agency prioritize endangered species recovery. USFWS works to protect 1,275 threatened and endangered species under the Endangered Species Act, and each of these species requires an associated species recovery plan. These plans outline actions, recovery criteria, and other guidelines for species recovery. However, funding limits how many and which recovery plans each of the eight regions USFWS oversees may focus on.

Facing questions of how to best allocate these funds, the **Endangered Species Act (ESA) Decision-making team** has been working with USFWS researchers, academics, and others to create a decision-support tool to help inform this complex decision-making process.

Feeding a Hot, Hungry Planet

Creating sustainable food systems in the face of a changing climate isn't easy--but innovators around the world are making real progress

By Lisa Palmer, SESYNC Senior Fellow, in [Scientific American](#)

We need to move beyond thinking about the environment--our land, water and air--only as a source of inputs for the food system. Instead we need to recognize that global environmental changes can diminish yields, reduce the amount of food we produce, and affect how nutritious it is and where we produce it.

But just how does the experience of change prompt food systems actors and institutions to work toward solutions?

SESYNC Welcomes New Staff

SESYNC Welcomes Benoit Parmentier, Data Scientist

Benoit Parmentier is a trained geographer whose research interests include land cover change, climate, Remote Sensing/GIS, and social sciences. Benoit is from Belgium where he did his undergraduate studies and master in geography and Remote Sensing/Cartography. He holds a PhD in geography from Clark University in Worcester, Massachusetts. He later held positions of Postdoctoral Associate at the National Center for Ecological Analysis and Synthesis, and Postdoctoral Researcher and Research Associate at the Sustainability Solutions Initiative at the University of Maine.

SESYNC Welcomes Elizabeth Herzfeldt-Kamprath, Multimedia Specialist

Elizabeth Herzfeldt-Kamprath joins SESYNC as the Multimedia Specialist, where her work will focus on creating video stories to help communicate the important work supported by SESYNC. Herzfeldt-Kamprath is currently completing her Master of Fine Arts in Film & Electronic Media with a concentration on Environmental and Wildlife Filmmaking at American University. She has worked on films that focus on the Potomac River, solar co-ops, Albertan tar sands, and youth in Honduras. She is currently working on her thesis film featuring a bird rehabilitator in the U.S. Virgin Islands. Throughout her studies at American, Herzfeldt-Kamprath has participated in the Center for Environmental Filmmaking and is currently a scholar of the Center.

Null expectations for disease dynamics in shrinking habitat: dilution or amplification? Led by Christina Faust in *Proceedings of the Royal Society B* as part of the SESYNC Pursuit, **Land Use Change and Infectious Diseases**.

We're Hiring!

SESYNC seeks a **Research Assistant** who will contribute to multiple aspects of the Center's research mission. Job duties include: research computing support on statistical software; data management assistance for resident scientists; literature reviews; maintain catalogs of research findings and opportunities on our website.

Qualifying candidates will have a bachelor's in a science-related field (natural, social, or computer science); demonstrated excellence in interpersonal and written communications; coursework or hands-on experience with statistical software (e.g., Stata, SAS), programming language (e.g., R, python), or advanced spreadsheet use.

Please consider applying or share with colleagues! Applications are due July 14. Learn more about employment opportunities on our website:
