

# How to use (non) existing data to inform decision-making on community forestry

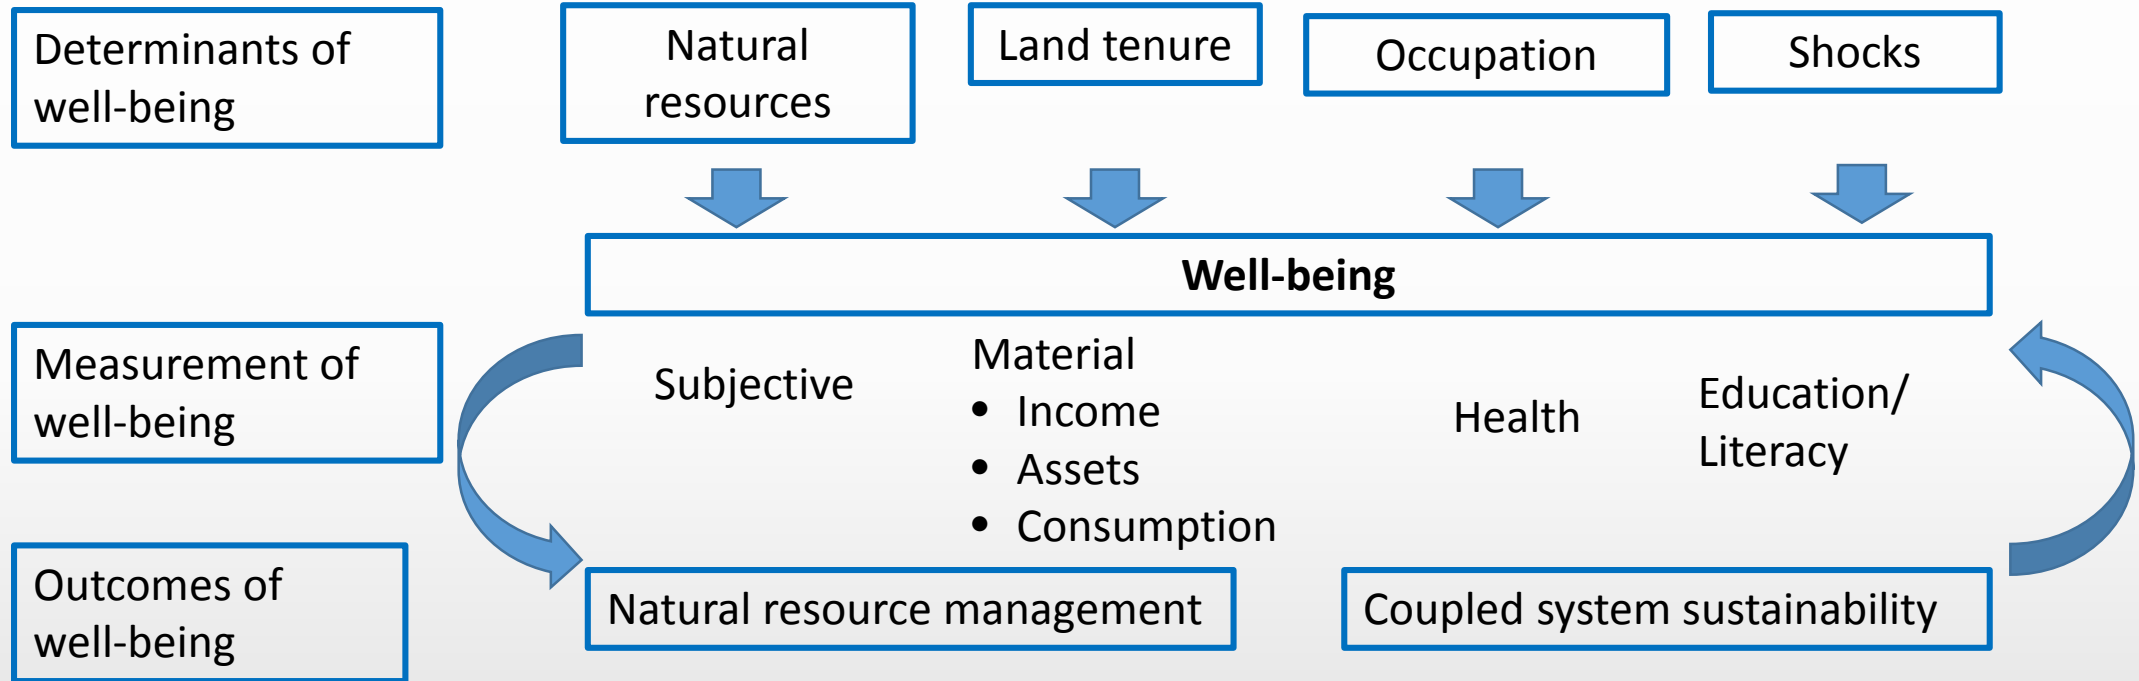

Laura Vang Rasmussen, Reem Hajjar & Sarah Wilson

Forests and Livelihoods: Assessment, Research and Engagement (FLARE) Network, School of Natural Resources & Environment, University of Michigan, MI 48109, USA

PART 1 OF CLASS 3

# Many variables of interest to community forestry

# Advantages of using the IFRI database

- Extensive dataset
- Allows for comparison across contexts (e.g. within Nepal) and countries
- Broad range of socioeconomic and ecological variables
- Well-developed and standardized data collection design

# Potential pitfalls when using the IFRI database

- Limited attribution
- Limited understanding of mechanisms linking forests and people/lack of in-depth knowledge
- Limited generalizability of knowledge from specific sites
- Shortcomings of specific data types
- Data-driven approach

# The attribution problem

- Why is it important to address?
  - Know how much of any impact is due to a given forestry arrangement, rather than changes that would have happened anyway, in the absence of the arrangement

- How?
  - No single method that is best in all cases
  - Counterfactual analysis for improved attribution: Compare key outcomes between exposed and similar controls (matching)
- Cases with correlation without causality!

PART 2 OF CLASS 3

# What is a policy brief?

- A concise summary of a particular issue
- It outlines the policy options to deal with the issue
- It provides recommendations on policy options.
- It is typically aimed at government policymakers and others interested in formulating or influencing policy
- It has to be short, catchy, and to the point

# How to write a policy brief to inform decision making on community forestry?

An illustrative example : Agrawal et al. (2008)

- *Central governments own about 86% of the 5.4 billion hectares of the world's forests*
- *But many government-owned forests are managed as common property for multiple uses by local communities and community-based organizations*
- *Local communities and organizations have come to govern close to an additional 200 million hectares of forests compared to the 1980s*

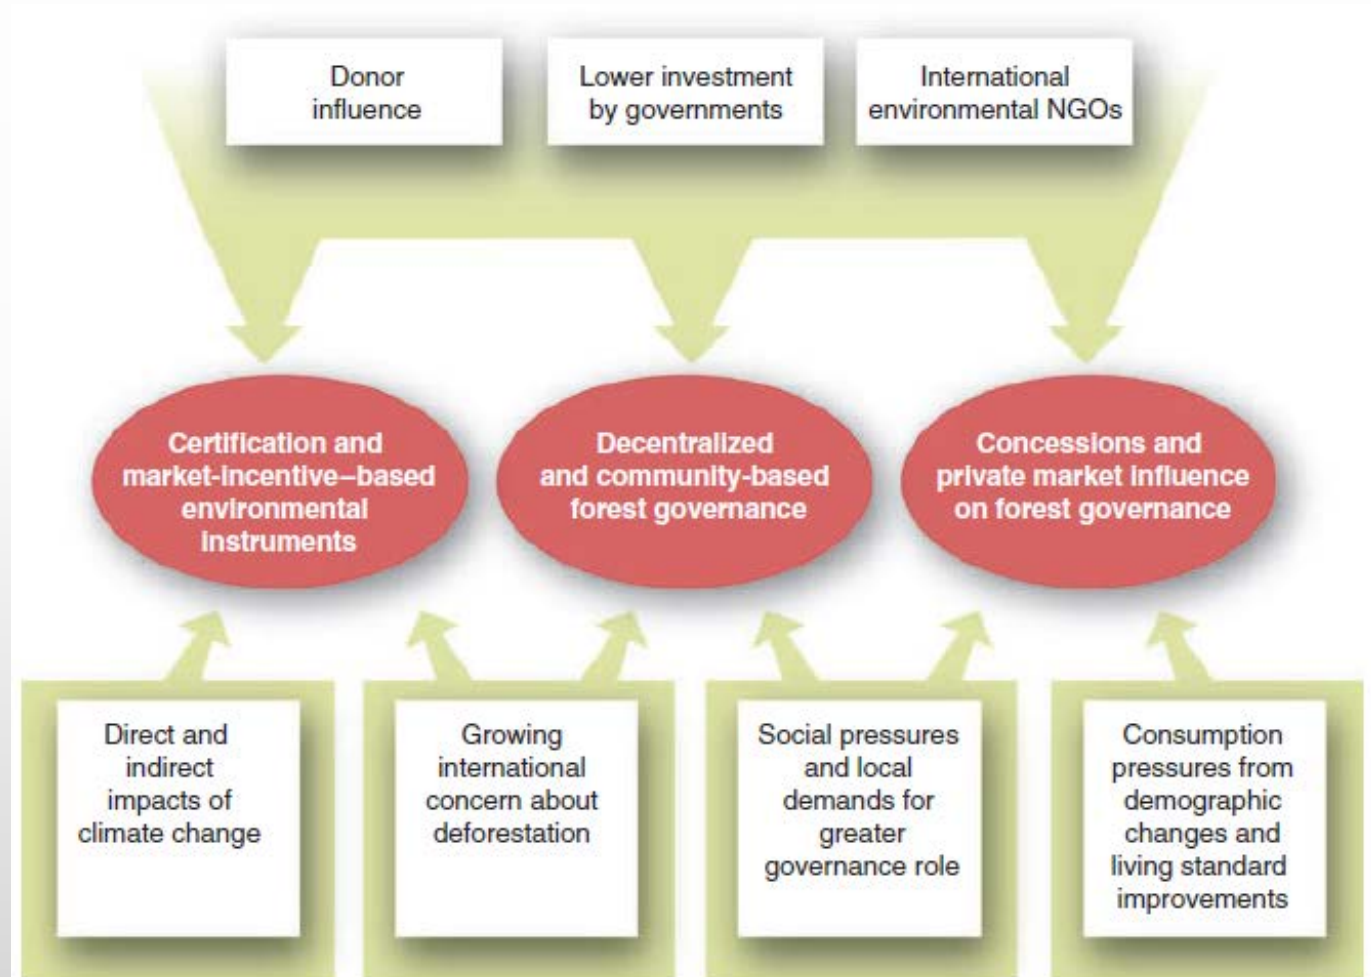

Fig. 1. Distribution of forest ownership by world regions.

# How to write a policy brief to inform decision making on community forestry?

An illustrative example :  
Agrawal et al. (2008)

*The key argument:*

- Attention to the factors that lead to effective governance, beyond ownership patterns, is necessary to address future forest governance challenges.

**Fig. 2.** Changes in forest governance and their social, economic, and political drivers.

# Home work assignment: Policy brief

- 1000 to 2000 words
- 1-2 figures
- Up to 15 references
  
- It must take point of departure in the analyses carried out in Class 2
- Present results in a way that is of interest to a particular audience (e.g., community leaders, national or local-level policy-makers, agriculture business stakeholders, conservationists, or NGO development agents).
