Now Accepting Applications from Science Communicators

It grapples with some of the most abstract of ideas. And it informs much of what, how, and why we do what we do.

Science: it’s not just for scientists.

The National Socio-Environmental Synthesis Center (SESYNC) at the University of Maryland seeks applications from motivated science communicators for fellowships that tackle the significant—and vital—cultural challenge of bringing science to life for a broad audience. This new fellowship program is intended to offer science communicators the opportunity to produce content informed by interactions with the diverse transdisciplinary research teams working at SESYNC.

Fellowship projects could take any form (long-form journalism, a podcast series, video, etc.), but must be in line with the overall mission of SESYNC—i.e., they must be informative about some aspect of the complex interactions between humans and the environment. We are particularly interested in funding fellowship projects that explore research on solutions to environmental problems and how environmental data are used to make decisions, rather than projects focused solely on the causes or impacts of environmental problems.
